

AI upgrades every quarter. **Your team doesn't.**

Most AI training teaches tools, tips and tricks that go stale when the tools change. LAI transforms your team's understanding of AI, so they get their highest-value results.

WHAT MAKES LAI DIFFERENT

Thinking, not tool tips

Habits that work in ChatGPT, Copilot, Gemini or Claude.
When your company changes tools, no one starts over.

Skills they own and use on command

The final test is a timed, realistic case matched to the learner, worked with a live AI. Passing it shows they can produce the work on demand, not just remember it.

Their experience counts

A prior knowledge assessment starts each learner where they are, so what they already know gets built on. Quarterly check-ins and a 12-month reassessment show their growth.

Managers see results, not conversations

You get every learner's Training Record on demand. Their answers stay private, so they think out loud honestly.

Nobody passes without proving it

Every learner is scored on their own work against set standards. Anyone who falls short is re-taught a different way until they meet them.

Evidence that holds up

Built to produce what DOJ compliance guidance asks for. Measured understanding, documented gaps, re-teaching to standard and records of growth.

A one-on-one voice coach for everyone

Each learner talks through the work with their own AI coach, at their own pace. No classroom, no scheduling, no one left behind.

Aligned to the DOL AI Literacy Framework

Built in line with the U.S. Department of Labor's framework (TEN 07-25), under four hours per learner.

\$750 per seat, per year

Published pricing for teams of 25 or more. Founding-client rates for early cohorts.

See it for yourself
